

About 786 tonnes of gold crossed that otherwise would not have

Gold shipped to the United States from Switzerland and the United Kingdom, against a line fitted to the 46 months before the election; the shaded area is everything above it since, worth \$72bn. The spread cleared the cost of shipping in 36 of these months but the metal moved in bulk in five, which account for 699 of the 786 tonnes: clearing pays for a shipment, it does not compel one

A month counts as cleared when the premium beat carry plus shipping on 5 days or more. The shaded area covers every month after the election, netting the seven that fall below the line
