

About 667 tonnes of gold crossed that otherwise would not have

Gold shipped to the United States from Switzerland and the United Kingdom, against a baseline fitted before the November 2024 election. The five-month excess is worth \$62bn, or 10% of the US goods trade deficit over the same months

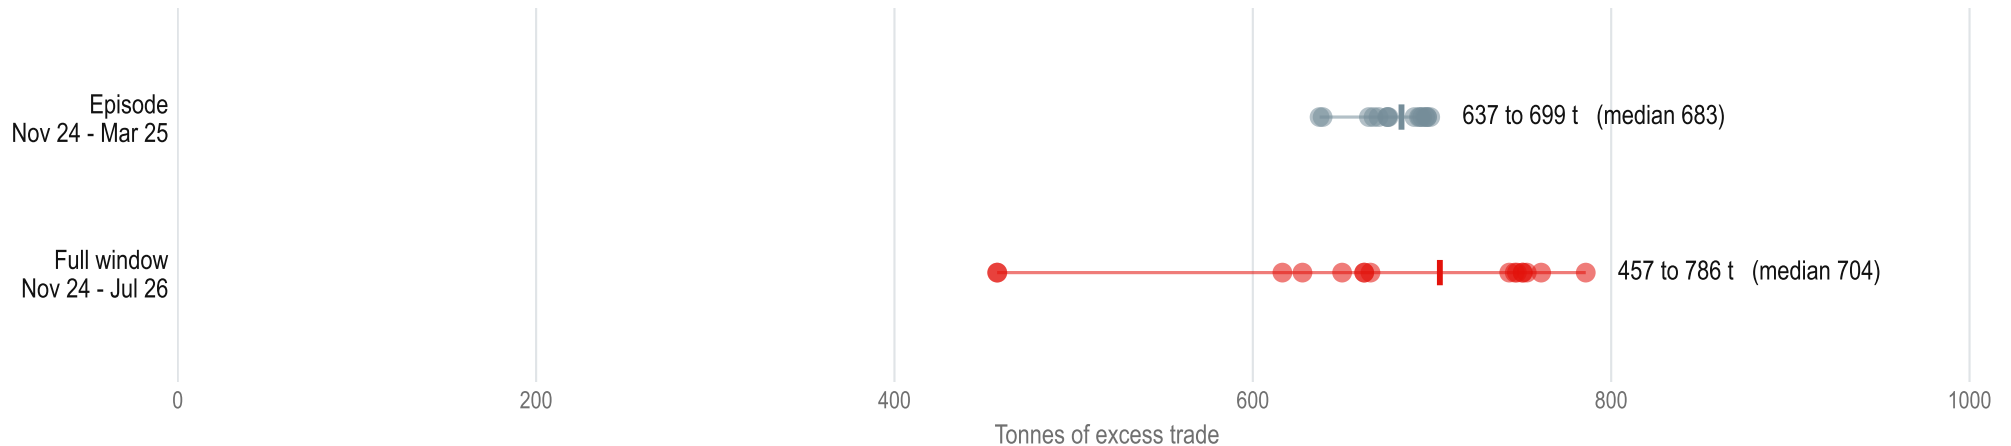

Shipments, and the baseline they left behind

Switzerland and the United Kingdom to the United States. Dashed: the projected baseline. Shaded: the excess

How much the answer depends on the baseline

Each dot is one of sixteen specifications: two pre-periods, with and without trend and seasonality, in levels and logs

Baseline is a seasonal monthly mean fitted to January 2021 - October 2024 and projected forward; the dots show all sixteen
