

Gold moves only when the spread clears the cost

The estimated COMEX–London spread against carry plus shipping, and the net metal that crossed.

Above the band the westward trade pays; below it the eastward one does

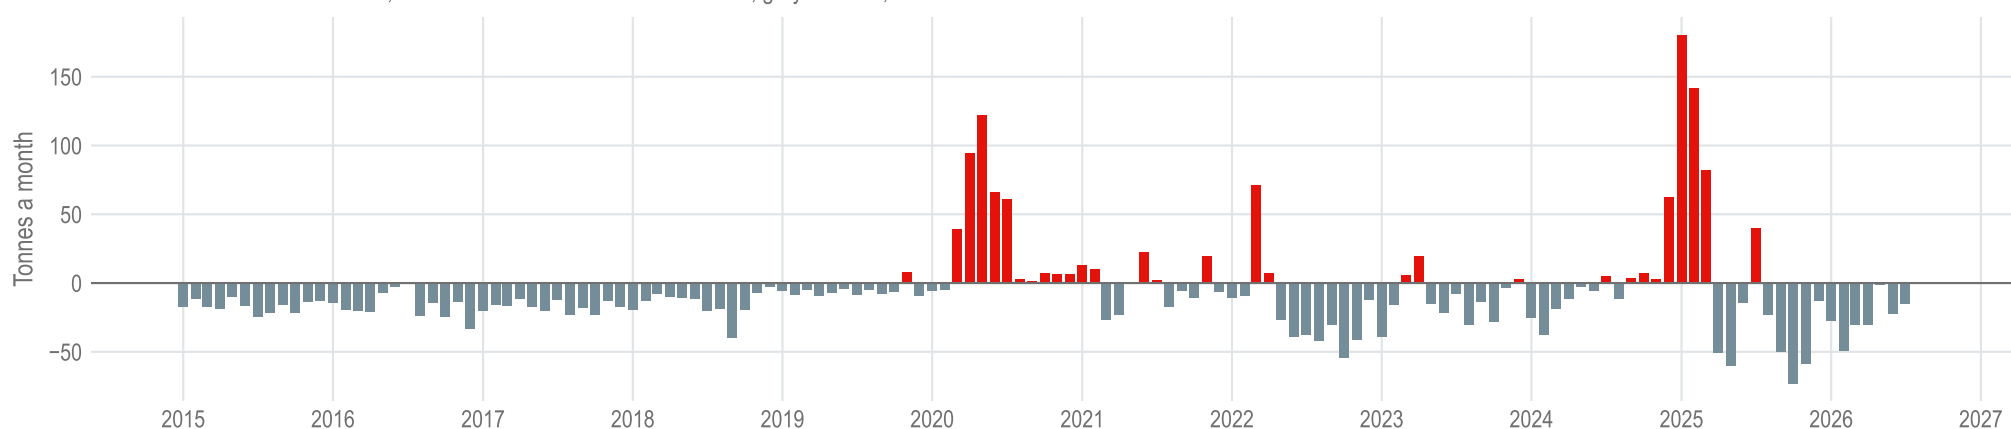

The spread, and what it has to clear

Dollars an ounce at a fixed ninety-day horizon; daily in the background, monthly means drawn

Net metal shipped

Switzerland to the United States, both directions netted. Red is net west, grey net east; 108 of 139 months are net east

Both legs are Swiss customs, HS 7108 and 7115: US export figures carry no mass, so a net series taking one leg from each reporter would be Swiss exports minus nothing
