

About 524 tonnes of gold crossed that otherwise would not have

Gold shipped to the United States from Switzerland and the United Kingdom, against a straight line fitted to the whole series before the election and carried forward. The shaded area is 524 tonnes; the five-month episode within it is worth \$60bn, 10% of the US goods deficit over those months

The line is fitted by least squares to all 118 months from January 2015 to October 2024, drawn through them and then carried forward. The shaded area is everything after the election, netting the 12 months that fall below the line; the five to March 2025 are 645 tonnes on their own. Starting the line in 2019 or 2021 instead moves that episode figure to 693 or 699
