

About 524 tonnes of gold crossed that otherwise would not have

Gold shipped to the United States from Switzerland and the United Kingdom, against a line fitted to all 118 months from January 2015 to October 2024 and then carried forward unchanged. The shaded area since is 524 tonnes, after netting off the 12 months that fall below the line; the five-month episode alone is 645. The spread cleared the cost of shipping in 60 of these months but the metal moved in bulk in five: clearing pays for a shipment, it does not compel one

A month counts as cleared when the premium beat carry plus shipping on 5 days or more. The shaded area covers every month after the election, netting the 12 months that fall below the line. No dollar value is put on a netted area: metal went west at about \$2,800 an ounce and came back east above \$4,000, so the figure would turn on the price path rather than on the trade
