

About 540 tonnes of gold crossed that otherwise would not have

Gold imported by the United States, against a line fitted by least squares to all 118 months from January 2015 to October 2024 and then carried forward unchanged. The shaded area since is 540 tonnes, after netting off the 15 months that fall below the line; the five-month episode alone is 873

Census reports value, not mass, for HS 7108 and 7115, so tonnage is DERIVED: the month's customs value divided by the LBMA PM benchmark. Measured on the US side, so it will not agree to the tonne with the Swiss and UK export figures, which carry mass directly. The dotted vertical is the November 2024 election. The baseline is drawn across the whole chart, including the months it was fitted to
