

In, then out, and then quiet again

Swiss customs gold trade with the United States, tonnes a month.

535 tonnes went west in four months; 383 came back over the next eight

The reversal begins in the month gold was exempted, not in the month the premium turned - which is the whole of figure 3's right-hand panel in one picture. July 2025 interrupts it: 54 tonnes went west in a single month as the question briefly reopened. Both legs are Swiss customs figures in net mass, so nothing here depends on the gold price.
